Farm Name: _____ Date: _____

A year-round market is a challenging endeavor. In order to properly determine how your produce schedule fits into our year-round market, we ask that you mark the **farm products grid** below to indicate which products you intend to sell and when they will be available. Going through this process allows the Farmers of Orange to communicate in advance with our customers, partners and sponsors "what will be at market this week" so advertising can be arranged. It also allows us to "select" members that fit our market in a way that meets the needs and expectations of our customers.

Each month is broken into 2 periods, the 1st of the month until the 15th and from the 15th to the end of the month. A code of 1 means that only enough product is available to make less than 10 typical sales of that product. A code of 2 means that a fair supply of that product is available, i.e. up to 30 typical orders could be filled. A code of 3 means that you will have an abundant supply of the product.

For example: for the first part of April if you expect to have some spinach, maybe 6 lbs, and a typical customer buys one half to one pound (~12 sales), you would enter a 2 under the April 1 column on the spinach row.

1=Scarce (<10 sales)
2=Fair Supply (10-30 sales)
3=Abundant (>30 sales)
